Abstract. The abstract should briefly summarize the contents of the paper in 150–250 words.

MultilayerGraphs.jl is a Julia package for the creation, manipulation and analysis of the structure, dynamics and functions of multilayer graphs. A multilayer graph consists of multiple subgraphs called **layers** which can be interconnected through bipartite graphs called **interlayers**. In order to formally represent multilayer networks, multiple theoretical frameworks have been proposed and adopted to model a wide spectrum of high-dimensional, non-linear, multi-scale, time-dependent complex systems including molecular, neuronal, socio-technical and economic networks.

The package features an implementation that maps a standard integerlabelled vertex representation to a more user-friendly framework exporting all the objects a practitioner would expect such as nodes, vertices, layers, interlayers, etc.

MultilayerGraphs.jl is integrated within the [**JuliaGraphs**](https://github.com/JuliaGraphs) ecosystem extending [Graphs.jl](https://github.com/JuliaGraphs/Graphs.jl) with several multilayer-specific methods and metrics and within the [**JuliaDynamics**](https://github.com/JuliaDynamics) ecosystem allowing for agent-based modelling on general multilayer networks via [Agents.jl](https://github.com/JuliaDynamics/Agents.jl) for a comprehensive exploration of its features and functionalities we rec-

ommend to consult the package [README](https://github.com/JuliaGraphs/MultilayerGraphs.jl/blob/main/Rand [documentation](https://juliagraphs.org/MultilayerGraphs).

1 First Section

1.1 A Subsection Sample

Please note that the first paragraph of a section or subsection is not indented. The first paragraph that follows a table, figure, equation etc. does not need an indent, either.

Subsequent paragraphs, however, are indented.

Moroni and Monticone

2

Sample Heading (Third Level) Only two levels of headings should be numbered. Lower level headings remain unnumbered; they are formatted as run-in headings.

Sample Heading (Fourth Level) The contribution should contain no more than four levels of headings. Table 1 gives a summary of all heading levels.

Table 1. Table captions should be placed above the tables.

	*	Font size and style
		14 point, bold
1st-level heading	1 Introduction	12 point, bold
2nd-level heading	2.1 Printing Area	10 point, bold
3rd-level heading	Run-in Heading in Bold. Text follows	10 point, bold
4th-level heading	Lowest Level Heading. Text follows	10 point, italic

Displayed equations are centered and set on a separate line.

$$x + y = z \tag{1}$$

Please try to avoid rasterized images for line-art diagrams and schemas. Whenever possible, use vector graphics instead (see Fig. 1).

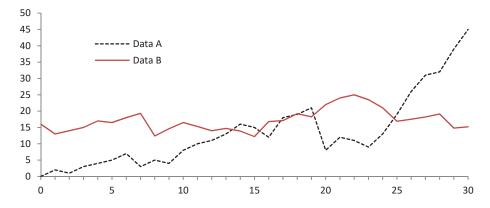

Fig. 1. A figure caption is always placed below the illustration. Please note that short captions are centered, while long ones are justified by the macro package automatically.

Theorem 1. This is a sample theorem. The run-in heading is set in bold, while the following text appears in italics. Definitions, lemmas, propositions, and corollaries are styled the same way.

Proof. Proofs, examples, and remarks have the initial word in italics, while the following text appears in normal font.

For citations of references, we prefer the use of square brackets and consecutive numbers. Citations using labels or the author/year convention are also acceptable. The following bibliography provides a sample reference list with entries for journal articles [1], an LNCS chapter [2], a book [3], proceedings without editors [4], and a homepage [5]. Multiple citations are grouped [1–3], [1, 3–5].

Acknowledgements Please place your acknowledgments at the end of the paper, preceded by an unnumbered run-in heading (i.e. 3rd-level heading).
